Subject: Bee Houses in town

Hello Mr. Marvin,

We are Girl Scouts from troop 41103 you met with a few weeks ago to talk about bee houses. This email is to give you the information you requested about our project about the bees and bee houses. For our project, we are required to work for 50 hours. We have dedicated these 50 hours to helping the decreasing bee population. We have been working in many different ways to help fix this problem, and to spread awareness to others. One way that we have been planning to help is with bee houses. These bee houses will help the bees, specifically the mason bees, who are the most endangered types of bees in the world. Mason bees are also not aggressive, so nobody will get stung as long as people don't threaten them. The houses will be placed 1-6 feet up from the ground. This will benefit the town as well as benefit the bees. The bees will provide the pollination that the town needs in order to produce plants such as trees and flowers. Without the bee houses, no such bees would stay in our community. But, with bee houses placed around the town, mason bees will be able to pollinate and contribute to the growing of plants within our own and neighboring towns and communities. Thank you for helping us with our project. If there is any other information you need about our project, we would be happy to provide it. Thank you again!

Yours Sincerely,

Danielle Sheen, Francesca Tallone, and Riya Mallya
